
ACKNOWLEDGEMENTS

I thank Prof. John A. Murphy for welcoming me into the project and for all of his support and advice throughout the years. The project has been a highly interesting and enjoyable learning experience and I give my appreciation to Prof. Murphy that I was chosen to work on it.

Further appreciation and thanks goes to Sheng-Ze Zhou and Jean Garnier for their extensive help and advice relating to the practical and theoretical aspects of the project and to the Murphy group, past and present, for all of their support and kindness. A special thanks goes my peers (Donna, Mike, Julian, Natalie, Iain and Justyna) for making my PhD a thoroughly enjoyable experience and the Tomkinson group for making the lab a very pleasant place to work.

I am grateful for the financial support offered by SFC and EPSRC for the funding of my PhD and BAE systems for their contribution. Additional thanks goes to the EPSRC National Mass Spectrometry Service, Swansea, for spectra, Prof. John Walton (University of St. Andrews) for EPR data and Craig Irvin for NMR analyses.

To Mum & Dad, love Harry.
